Operation Manual for Storers 'Airwing' Range of Hot Multidecks

Storers 'Airwing' runs from a 13amp plug. The hot multideck system has four display shelves which have separate digital temperature controls, so each shelf can be set to the desired heat required. The display shelves are made up of a black lift off panel for easy cleaning, and a stainless panel to expose the heating element. Ensure the power is isolated before doing this. Clean with a damp cloth and sanitizer. The digital controls are all in an easily accessible control panel on the front of the multideck where you can find easy to follow instructions to alter the settings, there is also access to the lighting and power controls in here.
